

Seed: Controls the randomization of the generator, including rotation of main stems and branches, and scale of main stems, branches, and berries.

Resolution: Controls the amount of polys in the branches and stems.

Main Stem Density: Controls the amount of main stems.

Branch Density: Controls the amount of branches.

Berry Distance: Control the minimum distance that berries can be from one another.

Berry Density: Controls the amount of berries.

Branch Start: Controls where the branches begin to sprout from the main stems.
